

Specially designed for preventing and treating gout attacks or hyperuricemia.

Malasia's JAKIM certification procedure in progress

High performed supplement made in Japan

No.1 sales in Japan's health care e-commerce

Recommended for use in people who would like :

prevent gout attacks; lower the level of uric acid; decrease blood pressure; ease the pain of rheumatism; diminish bow back pain and joint pain etc., "KEIYOU PREMIUM" will resolve your problem.

Positive effects:

Enhancement of uric acid excretion, decrease in the level of uric acid, prevention of cardiac diseases, prevention of anemia, anti-cancer, immunity improvement, anti-inflammatory, recovery from fatigue, improvement of bloodstream, suppression of rise in blood sugar level, bad cholesterol reduction, improvement in pain of rheumatism and of joint

For people who have gout attacks, rheumatism, and bow back pain !
"KEIYOU PREMIUM" will resolve your problem with ease!!

High performance ingredients fully contained!!

Cats claw, dream ingredient, accredited by WHO,

Cats claw has been used as an arcanum for eliminating the pain of neuralgia, rheumatism, joint inflammation, and bow back since the time of the Inca Civilization. Especially used as a specific for rheumatism, cats claw is called "dream tree". In 1974, Dr. Cambriger in Australia detected anti-tumour substance from cats claw. In 1990, he extracted successfully 6 kinds of alkaloid from that roots. Alkaloid, alkaline compound, containing nitrogen produced from plants, is effective enhancing immunity of life and also attack pathogenic microbial or virus invaded.

Re-evaluation of cats claw is in progress as a traditional remedy : in 1994, WHO(Wold Health Organisation) approved cats claw as anti-inflammatory herbal medicine with few side effects; at the time of 2 nuclear accidents at Chernobyl in 1986 and at Tokaimura in Ibaraki-ken in 1999, the government of Peru donated officially cats claw to each country for purpose of treatment.

Folic acid, nutrient approved by Health, Labour and Welfare Ministry

Folate and folic acid, forms of a water-soluble B vitamin, can produce red cell on binding to Vitamin B12. For this reason, we call it blood-forming vitamin. 50% of folic acids existing in the body are kept in the liver, the rest of that are in the cellular structure of frequent cell division.

This is an essential nutrient for pregnant in whose body unborn baby is growing, for babies, and for growing children. 2 times more folic acid intake for pregnant than usual is recommended by Health, Labour and Welfare Ministry.

Anserine, patented nutrient in Japan

Anserine is known for the effect of free radical repression, or enhancement of physical performance. The most significant function is to regulate uric acid levels by encouraging to resolve the lactic acid that causes fatigue.

- effects of fatigue reduction

Anserine is a kind of imidazole peptide made from 2 kinds of amino acids
imidazole peptide is a component produced in muscle helps repress free radicals.

Some reports say that repression of free radicals in the body helps reduce fatigue. Anserine has anti-oxidant activity that represses the bad reaction of radical oxygen, we could say anserine has effects of fatigue reduction. And its function to resolve lactic acid also helps restore the health.

- Good to prevent gout attacks and reduce their severity

Anserine helps inhibit production of uric acids, promote excretion of uric acid, and lower the level of uric acid.

As Anserine can increase "the level of lactic dehydrogenase (LDH)" metabolizing lactic acids, and promote excretion of uric acids by encouraging dissolve lactic acids produced in the body.

For this reason, anserine receives attention for its effectiveness in prevention and treatment of gout attacks.

High performance ingredients maximizing cats claw effects!

Ideal blending enhancing each other's effects

Effective ingredients for improvement of the uric acid level and of blood flow

Ingredient	Positive effects
Fish peptide	Helps dissolution of lactic acids, decrease in the level of uric acid, recovery from fatigue (a kind of imidazole peptide)
Cats claw powder	immunity improvement, anti-inflammatory, anti-pain, anti-tumor, antioxidant
Seaweed powder	Seaweed minerals (calcium, magnesium)
Robina extracts	Improvement of bloodstream, bad cholesterol reduction, anti-inflammatory
potassium citrate monohydrate	Enhancement of uric acid excretion by making PH of urine acidic, sodium excretion with potassium
Vitamin C	Enhancement of uric acid excretion
magnesium oxide	Regulate sodium quantity and calcium quantity in the body, repression of blood pressure, alkalify urine
Folic acid	Suppression of uric acid production in the body

■ All ingredients:

Fish peptide (anserine included), cats claw, reduced malt syrup, seaweed powder, Robina extracts, cellulose powder, potassium citrate monohydrate, v.c., magnesium oxide, calcium stearate, folic acid
